Jason L. Lind – Experienced Technical & Business Architect *with a Microsoft Stack Focus* (30+ years professional)

in/jasonshareshuman <> lind@multiplex.studio <> +1 414.704.0718 <> Odyss3us/Crusher (IRC) <> https://github.com/jlindo

I have been working professionally in information technology since age 11 in 1996 when I was an equity compensated Community Leader at GeoCities. Recently I have been a prolific founder developing enterprise grade AI startups with technical stacks generally hosted on Azure backed by Open AI with SQL Server and Cosmos DB datastores having application layers including ASP.NET Blazor (C#), React (TypeScript), Solidity (Ethereum Blockchain Smart Contracts) along with Python based Django and Streamlit frameworks and custom Ghost CMS Templates. Vast majority of recent work can be found on my GitHub.

Additionally I spent much of 2024 and 2025 authoring SBIR Proposals (recently discontinued DoD prototyping grant mechanism) for my consulting practice Groundbreaker Solutions with a focus on scaling government bureaucracy with Artificial Intelligence and Blockchain. Previously from 2007-2021 I supported onsite staff augmentation roles as a hands-on architect with several major roles at financial clients on La Salle Street in Chicago. From 2005-2007 I was a Staff Software Engineer at a boutique consulting firm in Chicago, in 2004 an American Airman. I cut my teeth in professional software as a Programmer Analyst at Fortis Health Insurance working in .NET 1.0: converting J2EE and Classic ASP Applications to the then infant platform. I started Marquette University majoring in Electrical and Computer Engineering with a minor in Political Science at age 16 in August 2001 and while in high school and college I worked in retail computer Sales Engineering part-time.

After a significant hiatus in staff augmentation style consulting I am looking to pivot back into Corp-to-Corp (1099 to Groundbreaker Solutions) contract work ideally supporting greenfield and/or legacy transformation efforts as a hands on technical and business architect – ideally in a remote capacity with a focused on cutting edge cloud AI.

Microsoft Azure

- Web Apps
  ASP.NET Blazor/MVC/Web API
  Python Django / Streamlit
- SQL Server
- Cosmos DB
  Graph API & Document/SQL
- Virtual Machines
  Windows 11 & Ubuntu Server 22LTS
- Azure DevOps
  Git Source Control, Pipelines, Kanban
- Cognitive Services
  Document Intelligence/OCR & Text-to-Speech
- Azure Communication Services
- Azure Bot Framework
- Service Fabric
- Key Vault
- Azure Active Directory B2C
- Storage
- Static Web Sites
  React & Angular w/Bootstrap

Programming Languages

- C#
- Python
- F#
- Rust
- Solidity
- TypeScript/JavaScript
- XAML
- LaTeX
- HTML/CSS/SVG
- VB.NET
- XML, XSLT, XSD & JSON

Design Patterns

- Model-View-ViewModel (MVVM)
- Model-Context-Protocol (MCP)
- Model-View-Presenter (MVP)
- Syndicated Microservices
- Model-View-Controller (MVC)

Artificial Intelligence

- OpenAI / ChatGPT
- IBM Watson
- pytorch & numpy
- Delphi.ai

.NET Technologies

- Multi-Platform App UI (MAUI)
- Windows Presentation Foundation (WPF)
- Windows Communications Foundation (WCF)
- Windows Identify Framework
- Windows Workflow Foundation (WF)
- SignalR
- MudBlazor / Telerik / DevExpress
- ReactiveUI / PRISM
- Windows Forms
- Entity Framework / nHibernate / Dapper

Query Languages & Engines

- Microsoft SQL Server (T-SQL)
- Oracle (PL/SQL)
- IBM DB2 (Cobol)
- Cosmos DB (Document SQL / Gremlin)
- SQL Server Integration Services (SSIS)
- Microsoft Reporting Services (SSRS)
- SQL Server Analysis Services (SSAS)
- Microsoft Access
- Microsoft Excel

Tools

- Microsoft Visual Studio
- Microsoft Visual Studio for Code
- SQL Server Management Studio
- Sparx Enterprise Architect
  UML & BPMN
- Microsoft Office 365 (O365/M365)
  Word, Excel, Publisher, PowerPoint, Visio
- gVim & Notepad++

Current Roles

Groundbreaker Solutions LLC
President & Chief Architect (2025-Present)
United Nations Cyberspace Command aka UN CYBERCOM
Founder & Chief Architect (2023-Present)
Department of Defense
Software Architect – AMPS 3.0 (2025-Present)
Software Architect – Space Force Instrumentation (2023-2025)
MultiPLEX Studio
Coalition Lead (2019-Present)
Watr Exchange
Chief Software Architect (2019-Present)
NexDevices
Chief Executive Officer (2011-Present)

Previous Roles

Jobme.Today (Programming.Team)
Founder & Chief Software Architect (2025)
National Financial Corporation
Software Architect (2023-2025)
Group Bobaloo / Hangman Tours
Software Architect (2024-2025)
Courseware Coach
Chief Architect (2024)
Divine Advice
Chief Architect (2023-2024)
KPMG
Enterprise Architect – State of New Mexico (2021)
mil.API.fit
Chief Transformation Engineer (2018-2019)
3D PDF Consortium
StratML Working Group Member (2017-2018)
United Airlines
Lead Architect – Merchandising IT (2015-2016)
Hallmark Data Systems (EBSCO)
Lead Architect – AS/400 to SaaS Migration (2015)
Guggenheim Partners
Lead Architect – Asset Management (2014)
Mesirow Financial
Lead Architect–Currency Trading Compliance (2013)
AlphaMetrix
Senior Architect–Hedge Fund Networking (2011-2012)
Neuberger Berman
Lead Architect – High Yield Fixed Income (2011)
The Adventurers Club of Chicago
Director of Technology (2006-2011)
Northern Trust Bank
Senior Architect –Distributed Frameworks (2009-2010)
Aon Benfield (previously Aon Re)
Senior Solutions Architect–Catastrophic Risk Modeling (2008-2009)
Senior Application Architect–Catastrophic Risk Modeling (2007-2008)
Citadel Investment Group
Senior Solutions Architect – EGlue Reporting (2008)
comScore
Web Services Architect (2007)
Triton-Tek
Lead Software Engineer (2006-2007)
Senior Software Engineer (2005-2006)
United States Air Force
Airman First Class (E3) (2003-2004)
Fortis Health Insurance
Programmer Analyst I (2002-2003)
National Association of Engineering Student Councils (NAESC)
Midwest Regional Vice President of Finance (2002-2003)
Mo's Restaurant Group
Chief Software Architect (2002)
Marquette University – Marquette University High School F.I.R.S.T Robotics
co-Founder (2002)
Marquette University Department of Mechanical Engineering
Computational Mathematician (RA) (2002)
Marquette University Institute of Electrical and Electronic Engineers (IEEE)
President (2002)
Marquette University Engineering Student Council (ESC)
Treasurer (2001-2002)
CompUSA
Senior Sales Engineer (2001-2002)
Junior State of America
National Deputy Director CIA (2000-2001)
Milwaukee PC
Sales Engineer (1998-2001)
Freedows OS Project
Administrative Lead (1997-2000)
GeoCities
Community Leader /Hollywood (1996-1999)

Education

Air Education Training Command (AETC)
Basic Military Training (2003-2004)
Advanced Drill and Leadership (2004)
Electronic Principles (2004)
Avionics (2004 – did not complete)
Marquette University (MU)
Part-Time/Non-Degree (2000-2001)
Electrical and Computer Engineering major
Political Science minor
Junior Standing (2001-2002)
Marquette University High School (MUHS)
Junior Complete (1998-2001)

Role Details

Groundbreaker Solutions LLC | Milwaukee, WI

President & Chief Architect (2025-Present)

I founded Groundbreaker Solutions as a consulting practice for both project based software architecture and submitting SBIR proposals with a focus on AI Automation. We have three partners and an active CAGE code. Some of our projects include proposals for AI Assisted Cognitive Warfare for the USAF and an Augmented Reality (AR) solution for identifying deficiencies in Rail Roads for the US Army.

United Nations Cyberspace Command (UN CYBERCOM)

Chief Architect (2023-Present)

UN CYBERCOM, the Security Council of Cyberspace, is a Decentralized Autonomous Organization (DAO) developed as a SmartContract with Solidity on Ethereum Blockchain that promotes arbitration of cyber disputes, coordination of Memos of Understanding (MoUs) as well as notification and resolution of cyber related threat vectors. The front-end, originally developed with Nethereum and ASP.NET Blazor, uses React and TypeScript.

Department of Defense

Software Architect - AMPS 3.0 (2025-Present)

Software Architect – Space Force Instrumentation (2023-2025)

I was brought in to bring an ASP.NET MVC/C# application that was not up to DoD standards – quickly rewriting it into a modern architecture that significantly reduced code complexity and introduced Unit Testing (MSTEST). The application pulls from several PostgresSQL Data Sources and merges the data in a searchable and sortable fashion. Additionally I introduced SignalR to push real-time instrumentation data to the warfighter.

Jobme.Today | Milwaukee, WI

Founder & Chief Software Architect (2025)

Jobme.Today was founded as Programming.Team, a product that used Artificial Intelligence to tailor resumes to job descriptions. Developed on ASP.NET Blazor with MudBlazor and Reactive UI this application enabled non-technical end users to enter their resume in a structured format which the application then summarized highlighting relevant matching details that were in the job description. Their resume was generated into LaTeX which was then rendered into PDF. The backend included ChatGPT, Azure SQL Server and leveraged Model-Context-Protocol (MCP). Other features included Stripe for payments and Azure AD B2C for Identity Access Management (IAM).

National Financial Corporation | Milwaukee, WI

Software Architect (2023-2025)

NFC is a provider of Low-to-Moderate-Income (LMI) banking solutions and I led the build out of a Proof-of-Concept (POC) application targeting retail level Point-of-Sale (POS) locations such as Check Cashers. The solution migrated a complex Angular application to ASP.NET Blazor leveraging Telerik, Reactive UI and SQL Server Azure with a MAUI Application targeting iOS and Android for imaging checks and a Web API backend for syndicated services.

Group Bobaloo / Hangman Tours | Milwaukee, WI

Software Architect (2024-2025)

I developed a self-guided walking tours product in MAUI with the management tool developed in ASP.NET Blazor utilizing Azure SQL Server, Telerik, Reactive UI and Azure Cognitive Services Text-to-Speech (TTS) with the payments powered by Stripe as well as a Web API services layer. The application enabled non-technical managers to write complex tours and convert the text into AI generated speech, upload graphics and video and arrange them into a slide show with Geospatial way pointing. Additionally I migrated their physical location from SpotOn to Toast POS and their in house tours from Peak to Checkfront – leading the evaluation process of various options and the migration itself.

Courseware Coach

Chief Architect (2024)

This AI startup leveraged Delphi.ai to create a courseware platform that used “cloned” instructors to present an interactive educational experience on a web platform. Developed in ASP.NET Blazor, MudBlazor, Reactive UI, Cosmos DB (Document/SQL API), Azure Bot Framework, Azure Cognitive Services Document Intelligence (for identifying graphics relevant to the conversation), Bing Translation Services, and ChatGPT the product was very promising until Delphi suspended their external API.

Divine Advice

Chief Architect (2023-2024)

I led the development of a product that used a custom Python model to perform Optical-Character-Recognition (OCR) on user captured images with Runic Characters and then used IBM Watson to deliver “mystical readings” based on the detected runes. The application was written in MAUI with a Python Django Web Service exposing the custom model, an ASP.NET Blazor Management Portal leveraging Telerik and ReactiveUI with the backend hosted on Azure.

KPMG

Enterprise Architect – State of New Mexico (2021)

Designed and modeled a NoSQL data mart and messaging schema for the State of New Mexico’s Medicaid Transformation effort which was migrating from IBM DB2 to a MarkLogic backend. Heavily utilized Sparx Enterprise Architect to develop Class Diagrams which were then exported as XML and imported into MarkLogic. Proactively reached out to Federal and State agencies to gather requirements on industry standards for syndicating Medical Data.

3D PDF Consortium

StratML Working Group Member (2018-2019)

Strategy Markup Language (StratML) is an XML ontology for expressing strategic planning in a machine readable format. I led the development of the StratML 3.5 specification and developed an indexing tool in ASP.NET MVC and Cosmos DB (Document/SQL API) along with an Extract-Transform-Load (ETL) for capturing, storing and rendering IRS Form 990 (Non-Profit Disclosure) into StratML.

United Airlines | Chicago, IL

Lead Architect – Merchandising IT (2015-2016)

At UAL I led the integration of Artificial Intelligence into the non-Airfare pricing pipeline, using Windows Workflow Foundation (WF) to orchestrate a complex process of capturing data and metadata from several systems to quote, present and purchase upgrades and additional item purchases across all United channels. Specifically, when a customer chose a flight, they would be presented with 3 additional purchase options which were chosen, and priced, based on a variety of factors including flight information, customer history and even the cookies in their browser. Additionally, I proposed, designed and developed United Enterprise Library (UEL) which exposed libraries such as Data Access, Logging and Encryption that greatly increased developer productivity and code quality. Introduced HighCharts, TypeScript and SignalR to develop a portal that presented real-time customer metrics from Tibco Rendezvous.

Hallmark Data Systems (EBSCO) | Skokie, IL

Lead Architect (2015)

Hallmark was a magazine subscription management company that had an AS/400 Mainframe and IBM DB2 product that they were replacing with a C# ASP.NET MVC/Angular, Web API and Microsoft SQL Server 2014 Software-as-a-Service (SaaS) product. I introduced a custom ASP.NET WebAPI library that used Attributes to dynamically build out the REST end-points from the business layer, a custom Data-Access library to interact with stored procedures and hydrate polymorphic class structures, as well as a Domain-Specific-Language for filtering, sorting and ordering data. Introduced TypeScript which greatly improved both code and build quality. Led a team of 5.

Guggenheim Partners | Chicago, IL

Lead Architect – Asset Management (2014)

I was brought in to design and implement a unified solution to a hodgepodge of Microsoft Office (primarily Excel and Access) applications that powered their back office. We created a centralized data mart in SQL Server 2014 and a custom framework built using C# and TypeScript with ASP.NET MVC, DevExpress, Entity Framework, Web API and Knockout.js. Completed two applications on this framework: Invoicing and Credit Monitoring. Additionally, refactored and enhanced a VB.NET batch application called AutoProc. Led a team of 5.

Mesirow Financial | Chicago, IL

Lead Architect – Currency Trading Compliance (2013)

In order to comply with complex pegging requirements I designed and helped implement a C# ASP.NET WebForms portal with a SQL Server 2012 backend that enabled non-technical end users to model arbitrary Currency Compliance Contracts and expose those requirements to internal trading systems. Included novel use of triggers to populate history tables in a way compliant for early versions of Entity Framework and leveraged Telerik for the UI. Led a team of 5.

AlphaMetrix | Chicago, IL

Senior Architect – Hedge Fund Networking (2011-2012)

AlphaMetrix brought me in to productionize a revolutionary product that aimed to be LinkedIn meets E*Trade for networking high net-worth accredited investors with hedge funds. The platform had a unique architecture with a C# ASP.NET WebForms front end that was defined in XML/Excel and whose business logic was encapsulated in layered, almost object-oriented, stored procedures in SQL Server 2008. I led the re-think of the page lifecycle for both performance reasons and to support end-user arranged widgets delivered by both AlphaMetrix and partners, the introduction of Indexed Views and re-structuring of the data model for performance reasons, and a compiled Domain-Specific-Language (DSL) for defining and binding queries in the XML view.

Neuberger Berman | Chicago, IL

Lead Architect – High Yield Fixed Income (2011)

I was brought in to modify the architecture of a C# Loan Default Project Engine to support both the existing legacy model and implement a new model that was prototyped in Excel. Initially intended for a WPF Credit Analysis tool to rate the books of large banks I implemented the model in a Windows Forms VB.NET Mortgage Backed Security (MBS) trading application and developed a new WPF tool for a Loan Modification Strategy Fund that purchased distressed/defaulted loans in whole, for pennies on the dollar, which were then modified (extend the term, reduce the principal, cut the interest rate, etc.) to keep the original holder in their house, make the loan perform and sell it for $0.60+/dollar. Introduced Prism/MVVM and Infragistics as well as Task-Parallel-Library (TPL) which included future-proofing this C#3 library for C#4 by returning Tasks in the method signatures.

Northern Trust Bank | Chicago, IL

Senior Architect – Distributed Frameworks (2009-2010)

NT had significant production code on .NET 1.1 and wanted to upgrade to 3.5 where I was tasked on rebooting Northern Trust Enterprise Library (NEL) to both provide a application blocks to aid and standardize developer code during the upgrade and provide a continuous deployment environment through Team Foundation Server. Introduced ASP.NET MVC and WPF to the enterprise, my library was used by over a thousand applications developed by nearly 8000 engineers.

Aon Benfield / Aon Re | Chicago, IL

Senior Solutions Architect – Catastrophic Risk Management (2008-2009)

Senior Application Architect - Catastrophic Risk Management (2007-2008)

As a key consultant on the Aon Re / Benfield Group merger I designed and developed enhancements to CatRange which was a product for aggregating, on a geo-coded basis various statistics on multi-billion dollar insurance portfolios from various industry standard and proprietary models that projected policy-level losses from various major natural disasters for export into OBIE. Application dealt with multi-TB data sets that were run locally on analyst workstations and was written in both VB.NET and C# in Windows Forms and ran across several local SQL Server databases. Performed groundbreaking work with Task-Parallel-Library that took processing this data down from several days to several hours.
